

AI-Enabled Cooperative Digital Service Marketplace

GOVERNMENT / GOVERNING AUTHORITY DASHBOARD

Complete Feature, Module, Screen, Input, Output & Workflow Document

Purpose: This document defines the complete role and functional scope of the governing authority portal. The authority is the governance, verification, monitoring, compliance and intelligence layer of the platform.

Critical responsibility boundary:

The **cooperative society adds and manages its own workers**. The governing authority does not normally create worker records. Instead, it verifies, monitors, audits and governs workers and societies submitted through the platform.

Core flow

Authority → Society Approval → Society Adds Workers → Authority Verifies → Marketplace → Monitoring & AI Insights

1. Authority Role in the Complete Ecosystem

The authority dashboard should provide a centralized view of all registered cooperative societies and their verified workforce. It should support governance decisions without taking over the daily operations of individual societies.

Area	Authority Responsibility
Societies	Register, review, approve, suspend, monitor and inspect cooperative societies.
Workers	View workers submitted by societies; verify profiles and certifications; monitor status and performance.
Services	Monitor service categories, availability and regional coverage.
Bookings	Monitor aggregated booking activity and operational performance.
Compliance	Track required documents, deadlines and non-compliance.
Welfare	Monitor worker welfare and insurance coverage.
Quality	Analyze ratings, cancellations, complaints and service quality.
Geo Analytics	Identify workforce concentration, demand and underserved locations.
AI	Forecast demand, identify skill gaps and support workforce planning.
Audit	Maintain traceability of sensitive authority actions.

Authority should generally **not** manually assign every worker to every booking. Operational allocation belongs to societies/platform logic.

2. Login & Authentication

Secure entry point for authorized government/department users.

Component	Details
Inputs	Email/username, password, optional OTP/2FA, captcha where required.
Roles	Super Admin, District Officer, Verification Officer, Inspection Officer and other configured authority roles.
Buttons	Login, Forgot Password, Send OTP, Verify OTP, Reset Password, Logout.
Output	Authenticated dashboard based on role and assigned jurisdiction.
Security	Role-based access control, session timeout, login history and audit logging.

Example: A District Officer should see only the societies/workforce within the districts assigned to that officer.

3. Main Authority Dashboard

The first screen should immediately show the health of the cooperative ecosystem.

KPI Cards

Card	What It Shows	Possible Action
Total Societies	All registered societies.	View Societies
Active Societies	Currently active societies.	View Active
Pending Approvals	Applications awaiting review.	Review Queue
Expiring Registrations	Societies nearing registration expiry/renewal.	View Expiring
Total Workers	Workers across societies.	View Workforce
Verified Workers	Workers whose records/certifications are verified.	View Verified
Pending Verification	Workers awaiting verification.	Verify Workers
Active Services	Services currently available.	View Services
Total Bookings	Marketplace booking count.	View Bookings
Transaction Value	Aggregated platform transaction value.	View Financials
Average Rating	Overall service quality indicator.	View Quality
Open Complaints	Unresolved complaints.	View Complaints

Dashboard Visualizations

- Society growth over time • Worker growth • Worker distribution by skill • Service demand • District performance • Booking trends • Complaint trends • Welfare coverage

Global Filters: State/Region, District, Taluk/Local Area, Society, Service Category, Date Range.

4. Society Management

Central directory of all cooperative societies connected to the authority.

Screen	Features
Society List	Search, filter, sort, pagination, export and quick actions.
Columns	Society Name, Registration No., District, Registration Date, Workers, Services, Status, Expiry, Actions.
Filters	District, status, registration date, expiry, worker count, service category.
Actions	View, Edit where authorized, Suspend, Activate, View Documents, Export.
Profile	Overview, Registration, Office Bearers, Workers, Services, Bookings, Financials, Certifications, Complaints, Welfare, Documents

Society Profile should be the authority's 360° view of one society.

Important status values: Pending Approval | Active | Under Review | Compliance Required | Suspended | Rejected | Expired.

5. Society Registration & Approval

The authority reviews society applications before the society receives full operational access.

Form Section	Inputs
Society Information	Name, registration number, registration date, society type, address, district, taluk, city/village, PIN.
Contact	Email, phone, alternate phone, website/contact details.
Office Bearers	President, secretary, treasurer, roles and contact information.
Operations	Member count, worker count, service categories, operating areas.
Bank/Financial	Required institutional bank information according to platform requirements.
Documents	Registration certificate, bylaws, address proof, office bearer/supporting documents and other required files.

Application Status Flow

Submitted → Under Review → Documents Verified → Approved
Submitted → Under Review → Correction Required → Resubmitted → Review
Submitted → Under Review → Rejected
Authority buttons: View Application View Document Verify Document Request Correction Approve Reject.

6. Compliance & Document Management

Ensures societies continuously maintain required records after approval.

Feature	Details
Compliance Cards	Total, Compliant, Action Required, Non-Compliant.
Compliance Table	Society, requirement, submitted document, verification status, due date, issue.
Document Categories	Registration, compliance, worker, certification, inspection, financial, welfare.
Document Metadata	Name, type, uploaded by, upload date, verification status, expiry date.
Actions	View, Download, Verify, Reject, Request Document, Send Reminder, Flag Issue, Mark Compliant.
Alerts	Upcoming expiry, missing document, rejected document, overdue compliance item.

7. Workforce Monitoring — Where Society-Added Workers Appear

This module is critical. Workers originate from the Society Dashboard. The authority sees those workers after the society submits them for verification.

Worker Lifecycle

Society → Workers → Add Worker
Society enters profile + skills + certification + documents
Submit → Worker status becomes Pending Verification
Authority → Workforce → Pending Verification
Authority verifies profile/certification
Approved → Worker becomes eligible for verified marketplace operations
Rejected → Reason returned to society for correction/resubmission

Authority Worker List

Field	Details
Worker	Worker ID, name, photo/profile status.
Society	Society name and registration number.
Location	District/operating area.
Skills	Primary and secondary skills/service categories.
Certification	Certification name, issuing authority, status and expiry.
Performance	Rating, completed jobs, cancellations where available.
Status	Pending Verification, Verified, Rejected, Expired, Suspended, Inactive.
Actions	View Profile, View Certification, Verify, Reject, Suspend, Reactivate, Export.

8. Worker Profile & Verification

Authority's detailed view of an individual worker submitted by a society.

Tab	Information
Basic	Photo, worker ID, name, contact, society, location, experience.
Skills	Skills, service categories, skill level and experience.
Certifications	Certificate name/number, issuer, issue date, expiry, evidence and status.
Job History	Completed/cancelled jobs and service activity.
Ratings	Average rating, rating distribution and feedback indicators.
Welfare	Welfare/insurance status and expiry where applicable.
Complaints	Complaints involving the worker and outcomes.
Audit	Important verification/status changes.

Verification Actions: Verify Profile Verify Certificate Reject Flag for Review Suspend Reactivate .
Certification verification should use the relevant formal/authorized certification source or process; the dashboard should not assume that a society itself is the certifying authority.

9. Skills & Certification Management

Component	Details
Skill Dashboard	Verified, Pending, Expired and Rejected certification counts.
Filters	District, society, skill, issuing authority, status and expiry.
Verification	Certificate number, certificate details, uploaded evidence and verification result.
Statuses	Verified, Pending, Invalid/Rejected, Expiring Soon, Expired.
Actions	Verify Certificate, View Certificate, Reject, Flag for Review, Send Renewal Reminder.
Skill Gap Link	Verified workforce data feeds skill-gap analysis and training recommendations.

10. Service Monitoring

Component	Details
Categories	Electrical, Plumbing, Carpentry, Painting, Cleaning, Driving, Gardening, Caregiving, Technician and other approved cat
Metrics	Number of societies, workers, bookings and average rating per service.
Filters	District, society, service, date.
Actions	View, enable/disable category, review performance.
Output	Identify high-demand, low-capacity and low-quality services.

11. Booking Monitoring

The authority monitors the marketplace without manually operating each booking.

KPI	Meaning
Today's Bookings	Bookings scheduled for the current day.
Completed	Successfully completed services.
Pending	Bookings awaiting confirmation/fulfilment.
Cancelled	Cancelled bookings.
Emergency	Urgent/on-demand bookings.

Booking Table

Booking ID Customer Society Worker Service Location Date/Time Amount Status

Filters: date, district, society, service, booking status. Actions: View Booking, View Customer, View Worker, View Society.

12. Geo-Spatial Analytics

Map-based governance and service-capacity analysis.

Map Layer	Meaning
Society	Location of registered cooperative societies.
Worker Concentration	Distribution of workforce by location.
Demand	Areas with high booking/service demand.
Shortage	Areas where demand exceeds verified workforce capacity.
Underserved Areas	Locations with low service availability.

Filters: State/Region District Taluk Service Date Range.
District drill-down: Society count, worker count, booking volume, top services, average rating and skill gap.

13. AI Insights & Decision Support

AI should convert operational data into actionable governance insights.

A. Demand Forecasting

Inputs: district, service category, historical bookings, time period. Outputs: predicted demand, percentage change, expected peak period and recommended capacity action.

B. Skill Gap Analysis

Compare verified worker supply against actual/predicted demand. Example: high electrical demand + insufficient certified electricians → recommend training/certification expansion.

C. Workforce Utilization

Identify underutilized, normally utilized and overloaded workforce/societies using available booking and availability data.

D. Anomaly / Risk Signals

Flag unusual cancellation rates, repeated complaints, sudden rating drops or other configured operational anomalies for human review.

14. Welfare & Insurance Monitoring

Component	Details
Cards	Total workers, covered, pending, expired and not covered.
Table	Worker, society, insurance/welfare status, expiry and action status.
Filters	District, society, coverage status, expiry.
Actions	View, Verify, Send Reminder, Flag.
Alerts	Coverage expiry and missing welfare information.

15. Complaints & Grievance Management

Component	Details
Cards	Open, Under Investigation, Resolved, High Priority.
Complaint Table	Complaint ID, raised by, against, category, priority, status, date.
Details	Description, evidence, involved society/worker, assigned officer, timeline and resolution.
Actions	Assign Officer, Request Response, Escalate, Resolve, Reject, Close.
Analytics	Complaint rate, recurring categories, society/worker patterns.

Complaint Flow: Raised → Assigned → Investigation → Response/Evidence → Resolution/Escalation → Closed

16. Quality & Ratings

Metric	Purpose
Overall Rating	Platform-wide service quality indicator.
Society Rating	Compare society-level service quality.
Worker Rating	Identify strong/low-performing workforce.
Rating Distribution	See 1–5 star distribution.
Cancellation Rate	Detect operational reliability problems.
Complaint Rate	Identify recurring service issues.
Action	Initiate review or inspection for persistent poor performance.

17. Inspection & Audit

Field	Input
Society	Select society.
Officer	Assigned inspection officer.
Date	Inspection date.
Type	Routine, complaint-based, compliance, special review.
Purpose	Reason for inspection.
Notes	Pre-inspection notes.
Checklist	Registration, documents, workers, certifications, welfare, service quality, financial records, complaints.
Result	Passed, Conditional, Failed.
Actions	Schedule Inspection, Save, Submit Report, Assign Corrective Action.

18. Financial Analytics

The authority dashboard should focus on aggregated financial oversight rather than exposing unnecessary sensitive banking information.

Metric	Details
Transaction Value	Aggregated platform transaction value.
Completed Transactions	Successfully settled transactions.
Refunds	Refunded transaction amount/count.
Pending Payments	Payments awaiting completion/settlement.
Reports	Monthly, society-wise, service-wise and district-wise summaries.
Actions	View Transactions, Export Report.

19. Reports & Export Center

Report	Possible Contents
Society Report	Registration, status, workforce, services, compliance, performance.
Worker Report	Worker count, skills, certification and verification status.
Service Report	Demand, supply, bookings, ratings and shortages.
Financial Report	Aggregated transaction and settlement statistics.
Welfare Report	Coverage and expiry status.
Complaint Report	Volume, categories, resolution and escalation.
Performance Report	Society/worker ratings, cancellations and service quality.
Actions	Generate, Preview, Download PDF, Download Excel, Print.

20. Notifications & Alerts

Alert Type	Examples
Critical	Serious complaint, failed inspection, major compliance issue.
Warning	Certificate expiring, registration renewal due, welfare expiry.
Info	New society application, worker submitted for verification, report generated.
AI Alert	Demand spike, skill shortage, unusual cancellation/complaint pattern.
Actions	View Details, Mark Read, Mark All Read, Delete where permitted.

21. Authority User & Role Management

Role	Typical Access
Super Admin	Full authority portal access and configuration.
District Officer	Societies/workforce/complaints/reports within assigned jurisdiction.
Verification Officer	Society documents, worker profiles and certification verification.
Inspection Officer	Inspection scheduling, checklists and reports.
Custom Roles	Optional role-based permissions for additional departments.

User table: Name | Role | Jurisdiction | Status | Last Login | Actions.

Actions: Add User | Edit | Deactivate | Reset Password | Assign Role.

22. Audit Logs

Every sensitive authority action should be traceable.

Logged Data	Example
User	Officer who performed the action.
Action	Approved society / verified certificate / suspended worker.
Module	Societies / Workforce / Compliance.
Entity	Affected society, worker, document or complaint.
Timestamp	Date and time.
Reason	Reason for rejection, suspension or other consequential action.
Filters	User, module, action, date, entity.
Actions	View Details, Export Log.

23. Global Search

One search bar should help officers quickly locate any important record.

Searchable IDs/Names: Society Name | Registration Number | Worker ID | Worker Name | Certificate Number | Booking ID | Complaint ID.

Example: Certificate Number → Worker Profile → Certification → Society → Verification History.

24. Common UI Components Required Across Modules

Component	Purpose
Search	Find records by name/ID.
Filter	Narrow records by status, location, category or date.
Sort	Sort table columns.
Pagination	Handle large datasets.
Column Selector	Choose visible table columns.
Export	Download filtered records.
Refresh	Reload latest data.
Status Badge	Show Pending, Verified, Active, Expired etc.
Modal	Approval, rejection, suspension and correction confirmation.
Drawer / Detail Panel	Quick record inspection without leaving the list.
Loading State	Skeleton/spinner during API calls.
Empty State	Clear message and next action when no records exist.
Error State	Readable error and retry action.
Toast	Success/failure confirmation after actions.

25. Statuses, Confirmations & Validation

Recommended status model

Society: Draft → Submitted → Under Review → Correction Required → Approved/Active → Suspended/Expired/Rejected.
Worker: Draft → Pending Verification → Verified → Rejected/Expired/Suspended/Inactive.
Complaint: Open → Assigned → Under Investigation → Resolved → Closed / Escalated.

Approval Modals

Approve: confirmation + optional note. Reject: mandatory reason. Suspend: mandatory reason + effective date where required. Request Correction: required corrections/documents.
--

26. Complete Authority Dashboard Flow

27. High-Level Data Relationships

AUTHORITY
■
■■■■ SOCIETIES
■ ■■■ WORKERS
■ ■ ■■■ SKILLS
■ ■ ■■■ CERTIFICATIONS
■ ■ ■■■ WELFARE / INSURANCE
■ ■■■ SERVICES
■ ■■■ BOOKINGS
■ ■■■ PAYMENTS
■ ■■■ RATINGS
■
■■■ COMPLAINTS
■■■ COMPLIANCE
■■■ INSPECTIONS
■■■ NOTIFICATIONS
■■■ AUDIT LOGS

Key ownership: Society 1 → Many Workers; Worker → Many Skills/Certifications; Worker → Many Bookings; Customer → Many Bookings; Booking → Payment + Rating + possible Complaint.

28. Recommended Development Priority

Phase	Build First
Phase 1 – Governance Core	Login, RBAC, Dashboard, Society Registration, Approval, Society Management, Document Verification.
Phase 2 – Workforce	Worker Monitoring, Worker Profile, Certification Verification, Skills, Compliance.
Phase 3 – Marketplace Monitoring	Services, Bookings, Ratings, Complaints, Welfare.
Phase 4 – Governance Intelligence	Geo Analytics, AI Demand Forecast, Skill Gap, Workforce Utilization.
Phase 5 – Enterprise Controls	Reports, Notifications, Inspections, Audit Logs, advanced permissions.

For a selection/demo prototype, Phase 1 + Phase 2 + a simplified AI Insights screen provides the strongest demonstration of the authority role.

29. Final Authority Dashboard Checklist

- Secure Authority Login + RBAC
- Dashboard KPI Cards + Charts
- Society Registration Queue
- Society Approval / Rejection / Correction
- Society Master List + Society Profile
- Compliance Tracking
- Document Verification
- Worker Monitoring
- Worker Verification
- Skill & Certification Monitoring
- Service Monitoring
- Booking Monitoring
- Geo-Spatial Analytics
- AI Demand Forecasting
- Skill Gap Analysis
- Workforce Utilization
- Welfare / Insurance Monitoring
- Complaints & Grievances
- Quality & Ratings
- Inspection Management
- Financial Analytics
- Reports & Export
- Notifications & Alerts
- User & Role Management
- Audit Logs
- Global Search
- Settings & Profile

30. One-Line Explanation for the Team

“The Government Authority Dashboard is the governance layer that approves cooperative societies, verifies the workers and certifications submitted by those societies, monitors compliance, quality, welfare, bookings and complaints, and uses geo-spatial and AI analytics to identify service demand and workforce gaps.”

Most important: Society adds the worker → Authority verifies the worker → Verified worker enters the marketplace.
